

# Quantum Computation

John McKinney  
Ventura College

- Mentor: Markus Ansmann
- Professor: Dr. John Martinis
- Big spenders: Disruptive Technologies Office (DTO)

# Classical Computation

- Operates on classical principles
- Bit can be in state 0 or 1
- Operations performed by logic gates (like flipping light switches)

# Quantum Computation

- Operates on Quantum principles
- Qubit can be in any state  $A|0\rangle + B|1\rangle$
- Operations performed by unitary transformations

$$\sin\left(\frac{1}{2}x\right)$$

- Quantum Systems

- Plucked Strings

- Quantum Systems

- Plucked Strings

$$\sin\left(\frac{\pi}{2} x\right)$$

- Quantum Systems

- Plucked Strings

$$\sin\left(\frac{\pi}{10} x\right)$$

- Quantum Systems

- Plucked Strings

$$\sin\left(\frac{1}{2}x\right)$$

$$\sin(x)$$

$$\sin\left(\frac{3}{2}x\right)$$

- Quantum Systems

- Plucked Strings

- Can only have specific vibrational modes

$|0\rangle$

$|1\rangle$

$|2\rangle$

- Quantum Systems
- Exist only in specific energy states

- Plucked Strings
- Vibrate only at specific frequencies – called harmonics

$$A \sin\left(\frac{1}{2} x\right)$$

+

$$B \sin(x)$$

=

$$A \sin\left(\frac{1}{2} x\right) + B \sin(x)$$

- Quantum Systems
- Exist only in specific energy values

- Plucked Strings
- Vibrate only at specific frequencies – called harmonics
- Linear combinations of harmonics are okay

$A|0\rangle$

+

$B|1\rangle$

=

$A|0\rangle + B|1\rangle$

## • Quantum Systems

- Exist only in specific energy values
- Can be in a superposition of energy states:  $A|0\rangle + B|1\rangle$

## • Plucked Strings

- Vibrate only at specific frequencies – called harmonics
- Linear combinations of harmonics are okay

- Quantum Systems

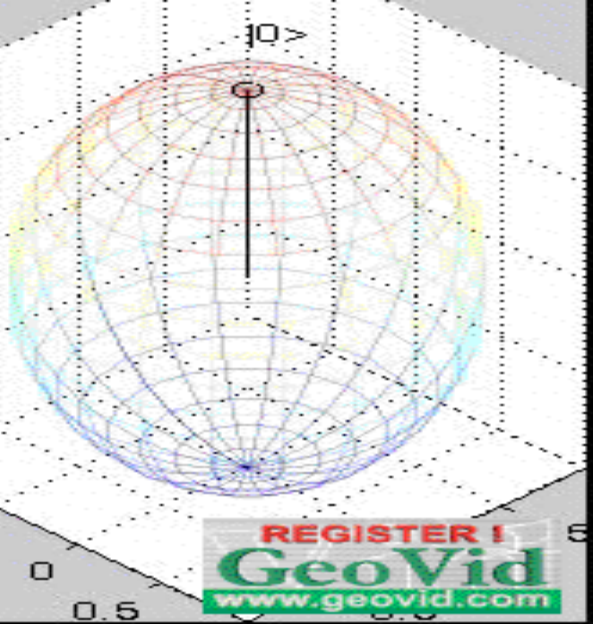

- Exist only in specific energy values
- Can be in a superposition of energy states:  $A|0\rangle + B|1\rangle$
- We can only measure a  $|0\rangle$  or a  $|1\rangle$

$$P(|0\rangle) = |A|^2$$

$$P(|1\rangle) = |B|^2$$

- Plucked Strings

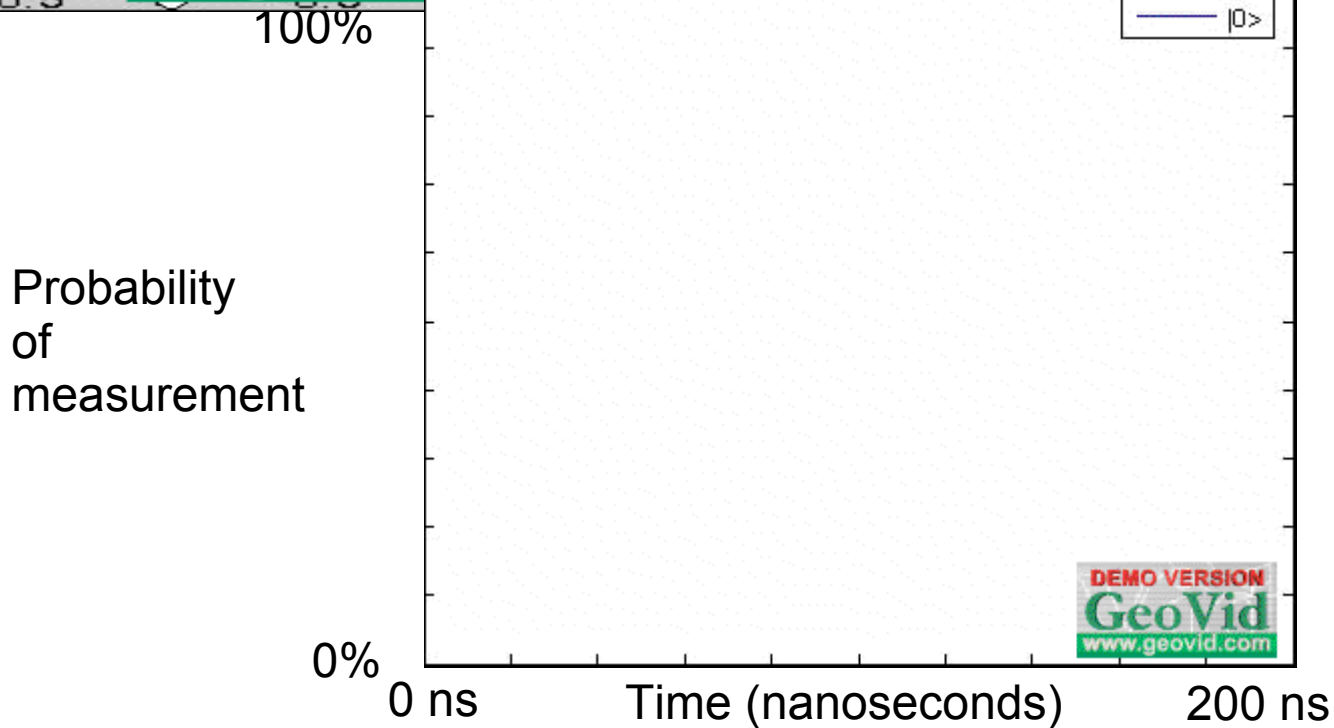

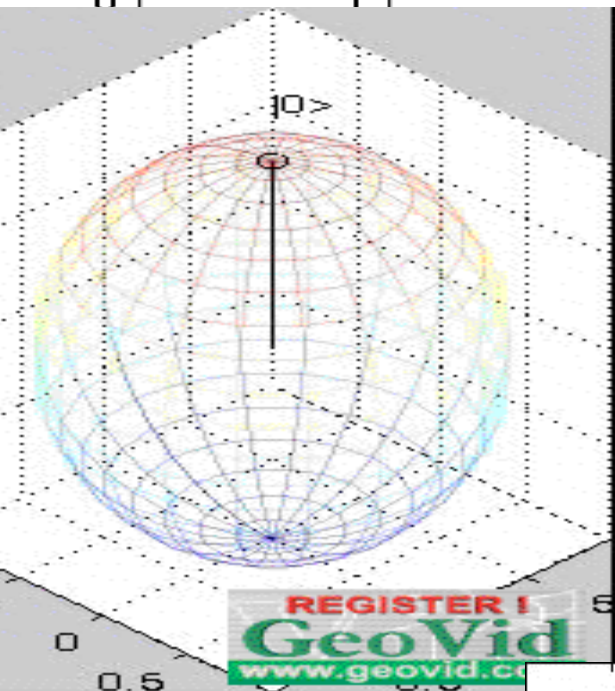

- Vibrate only at specific frequencies – called harmonics
- Linear combinations of harmonics are okay

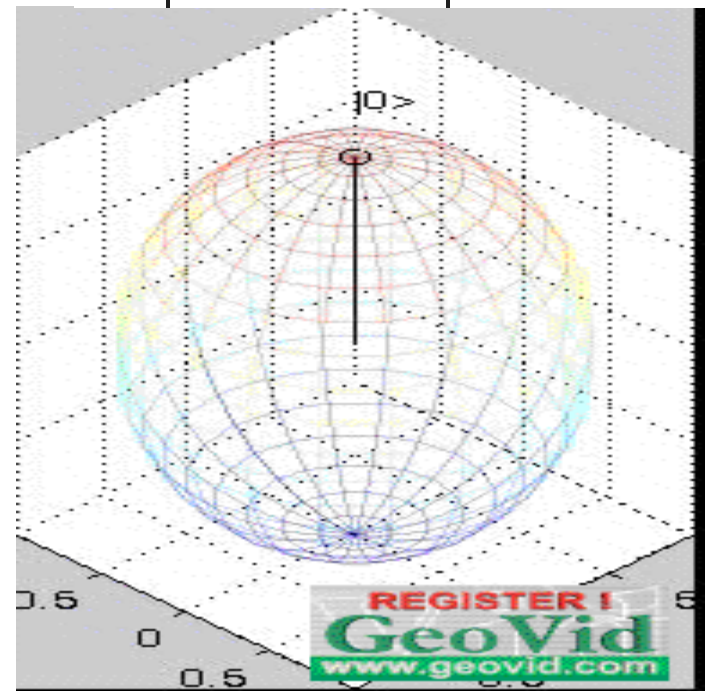

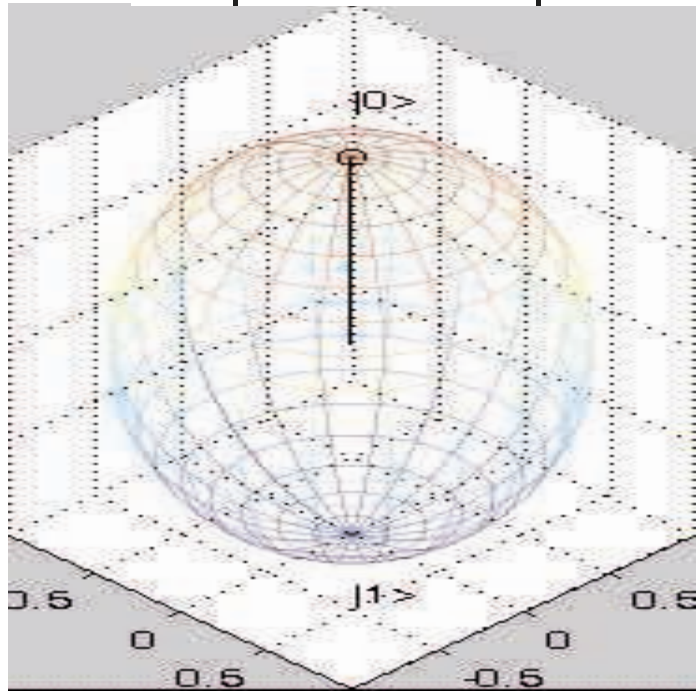

- State represented by vector on Bloch Sphere
- Operations represented by rotations about an axis

$$A_0 |0\rangle + A_1 |1\rangle$$

- State represented by vector on Bloch Sphere
- Operations represented by rotations about an axis

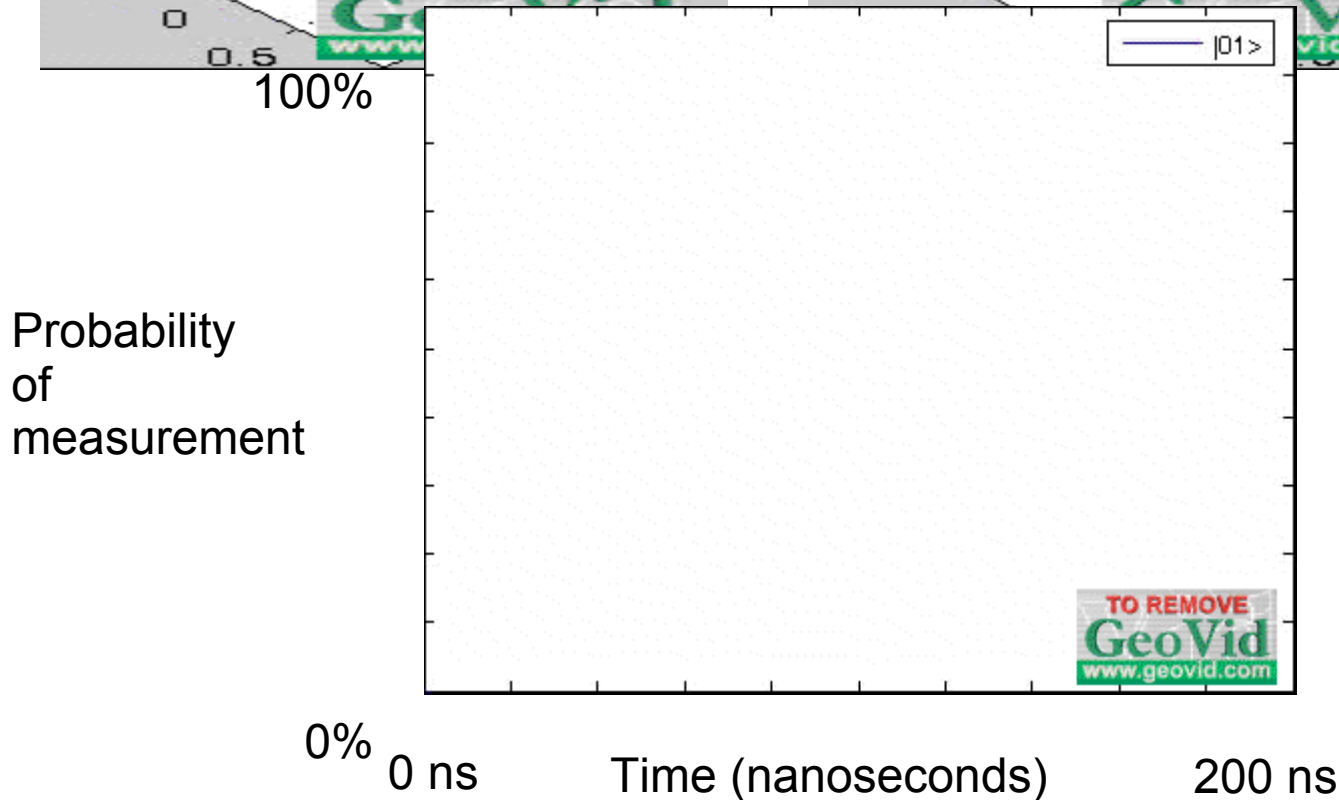

- Coupled Qubits behave as a single system
- A change in one qubit has an immediate effect on the other

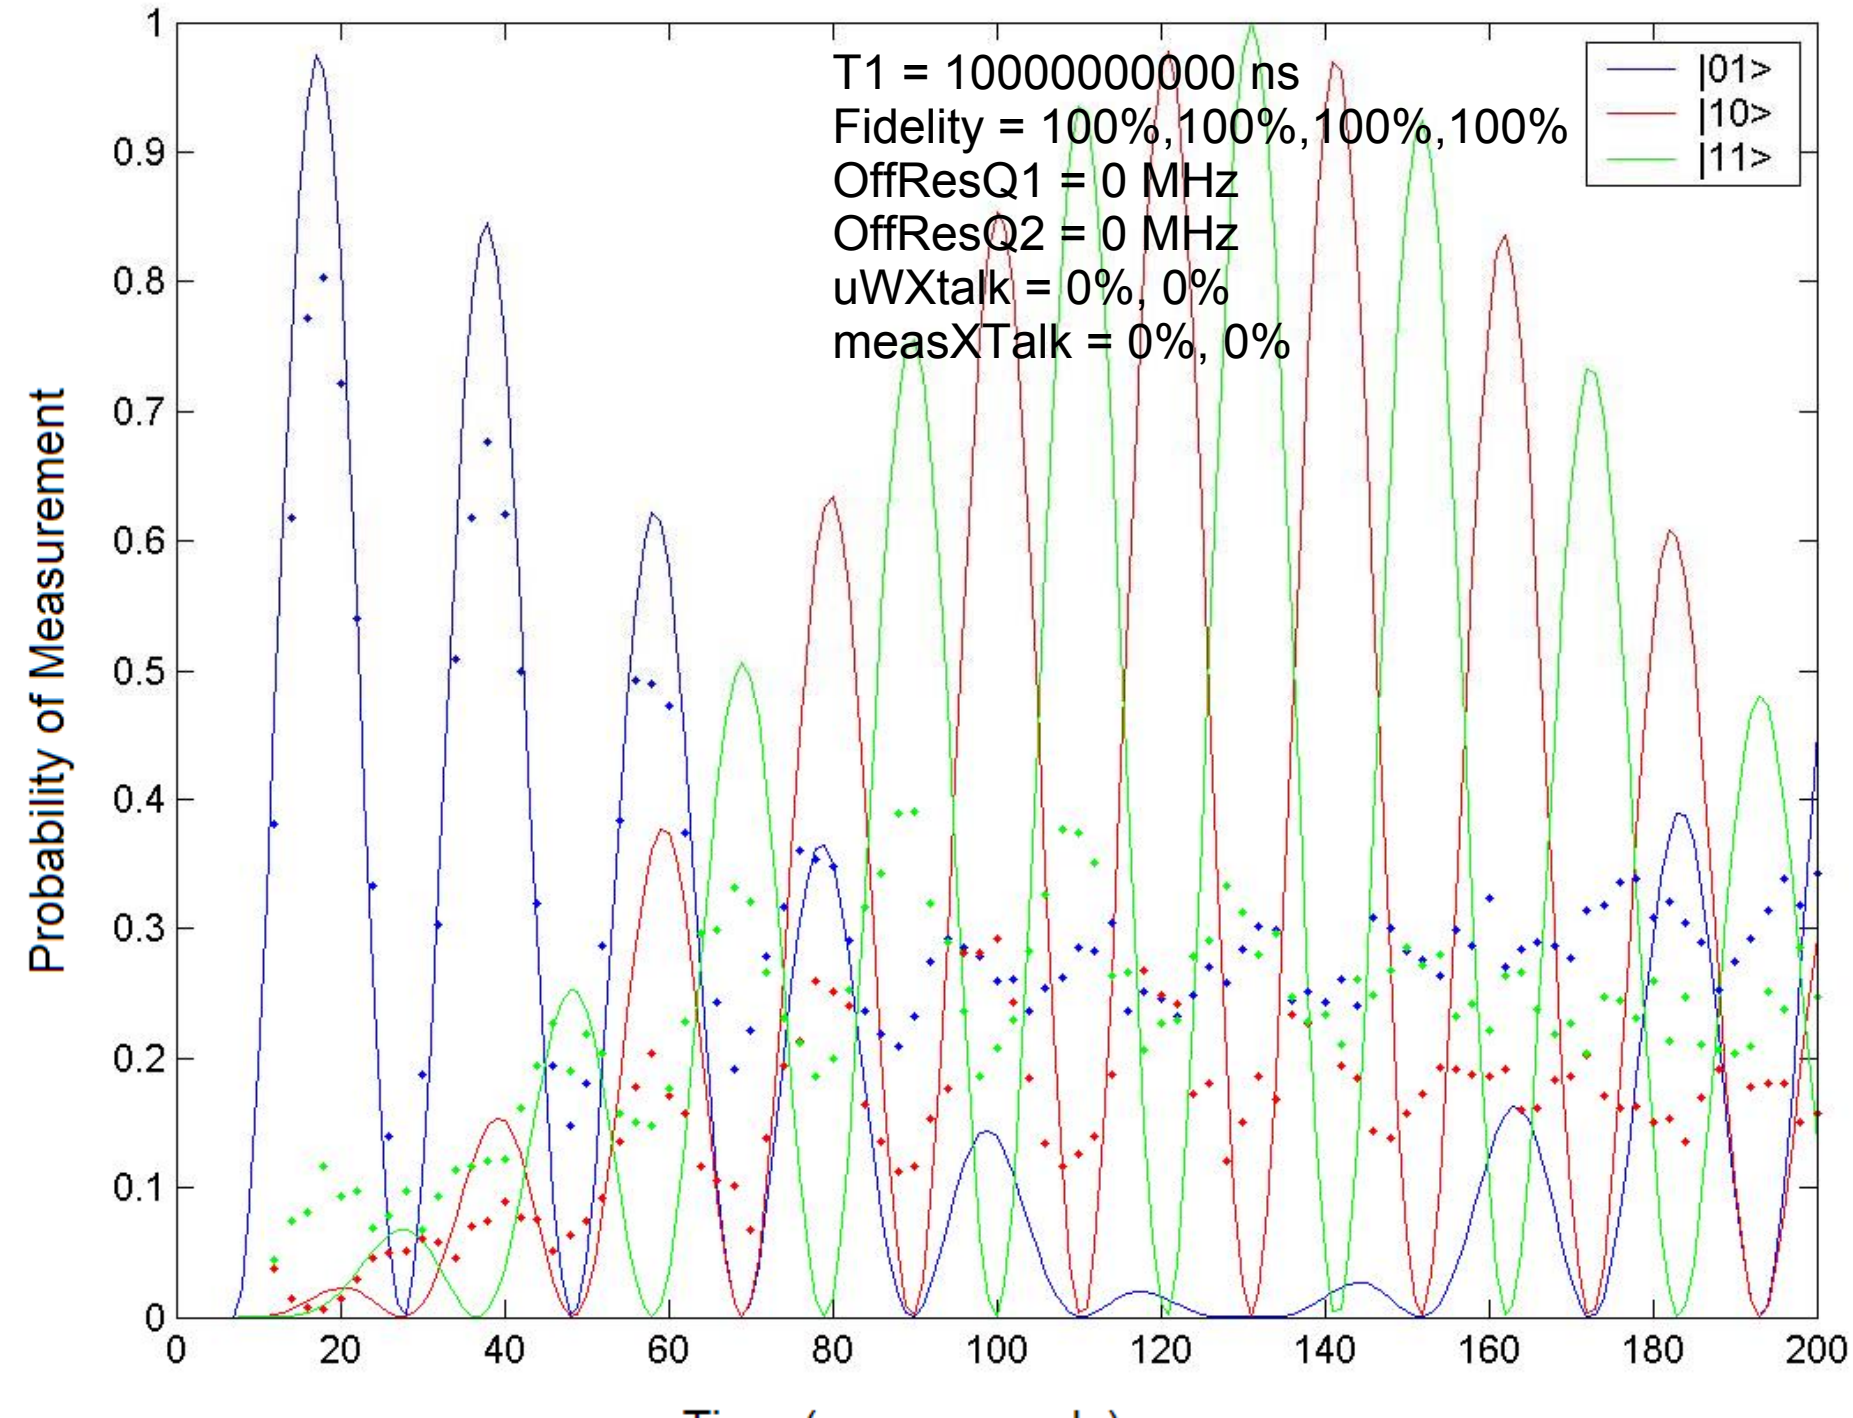

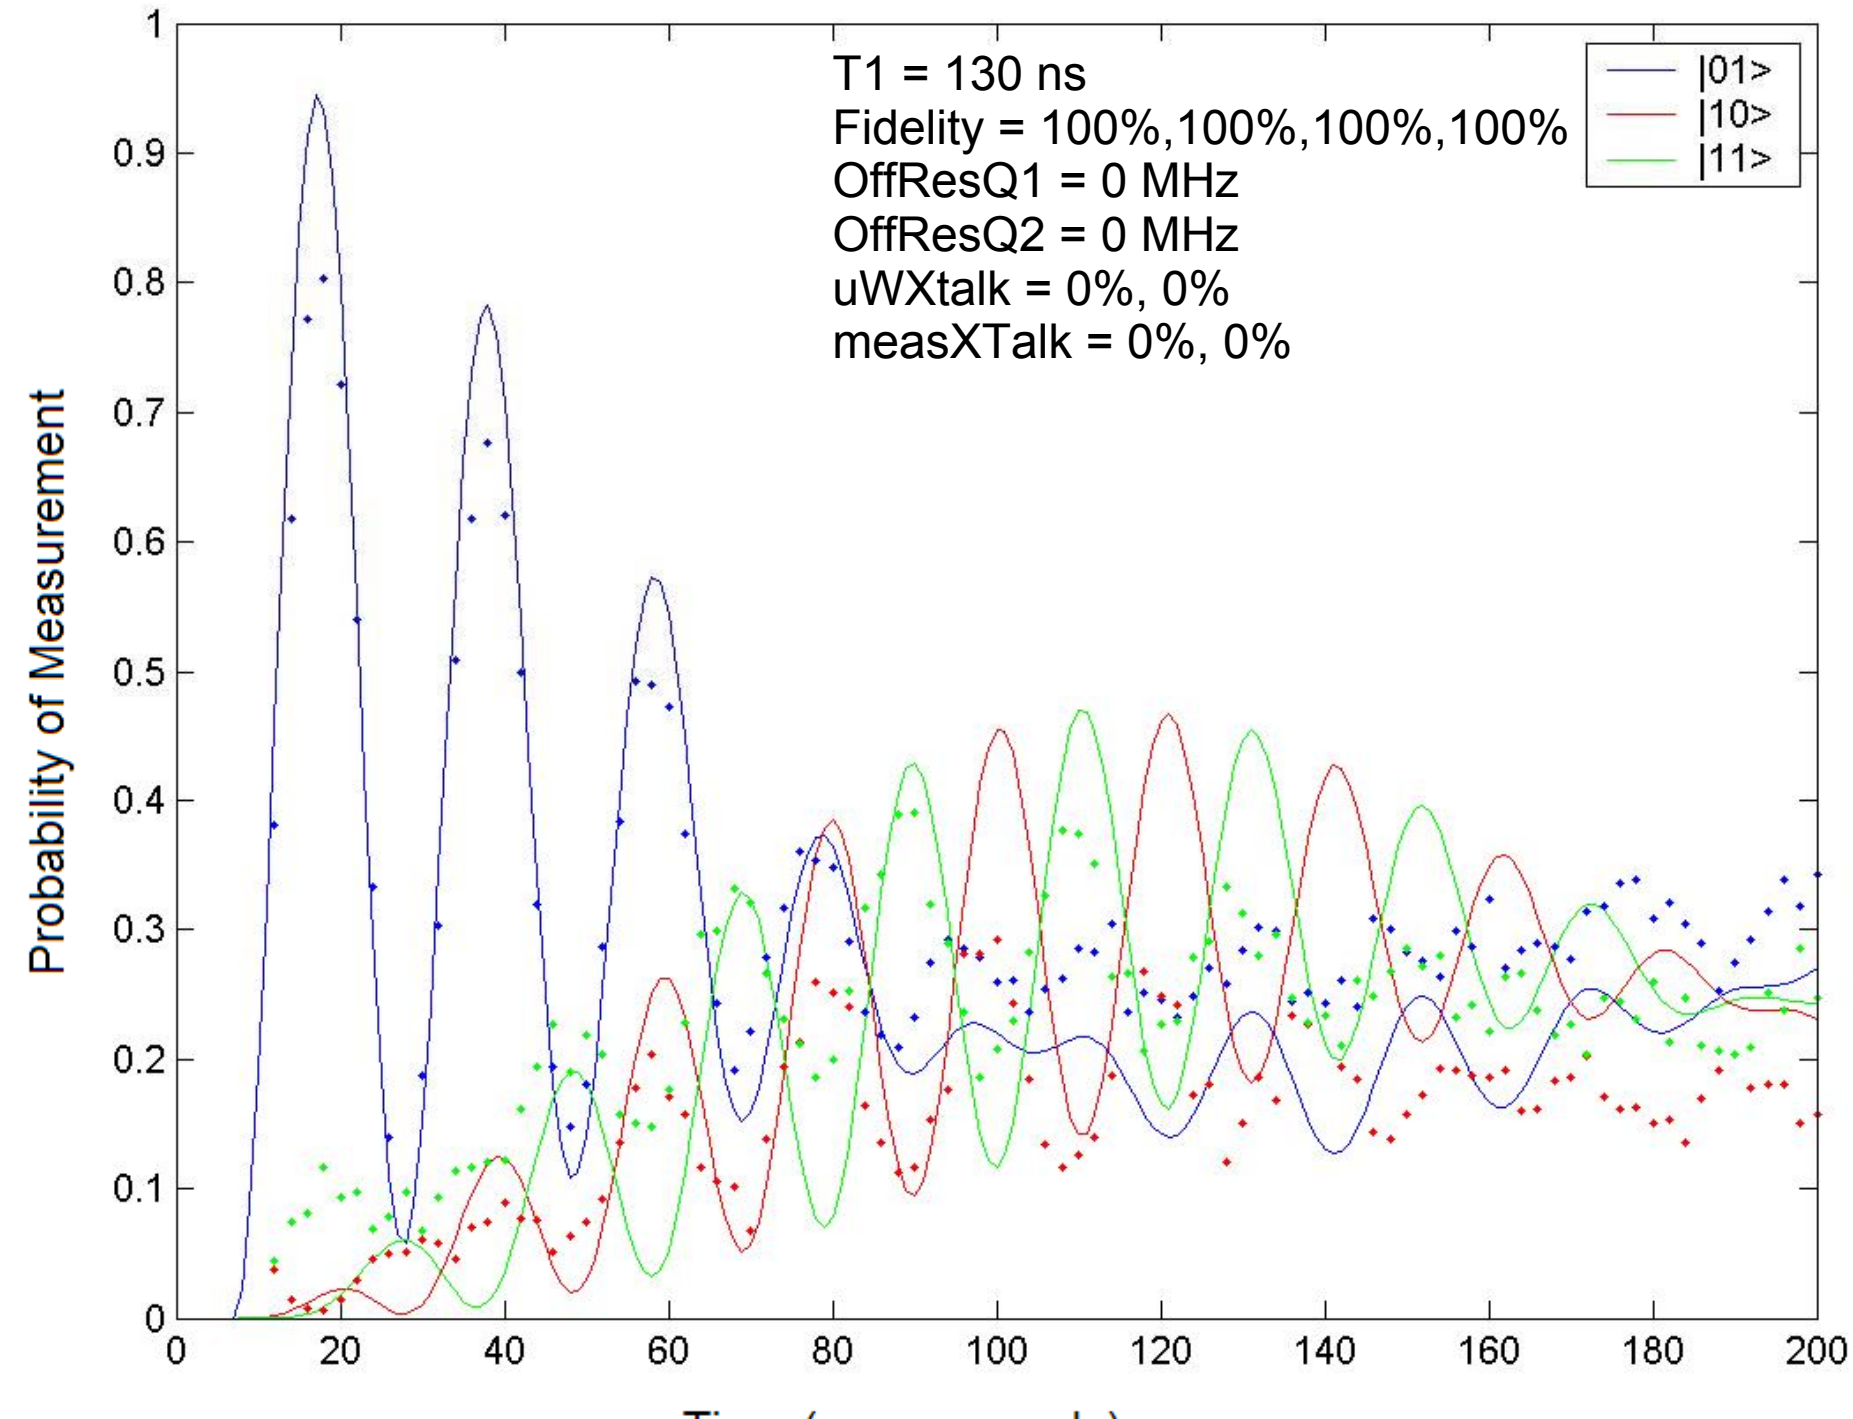

Probability of Measurement

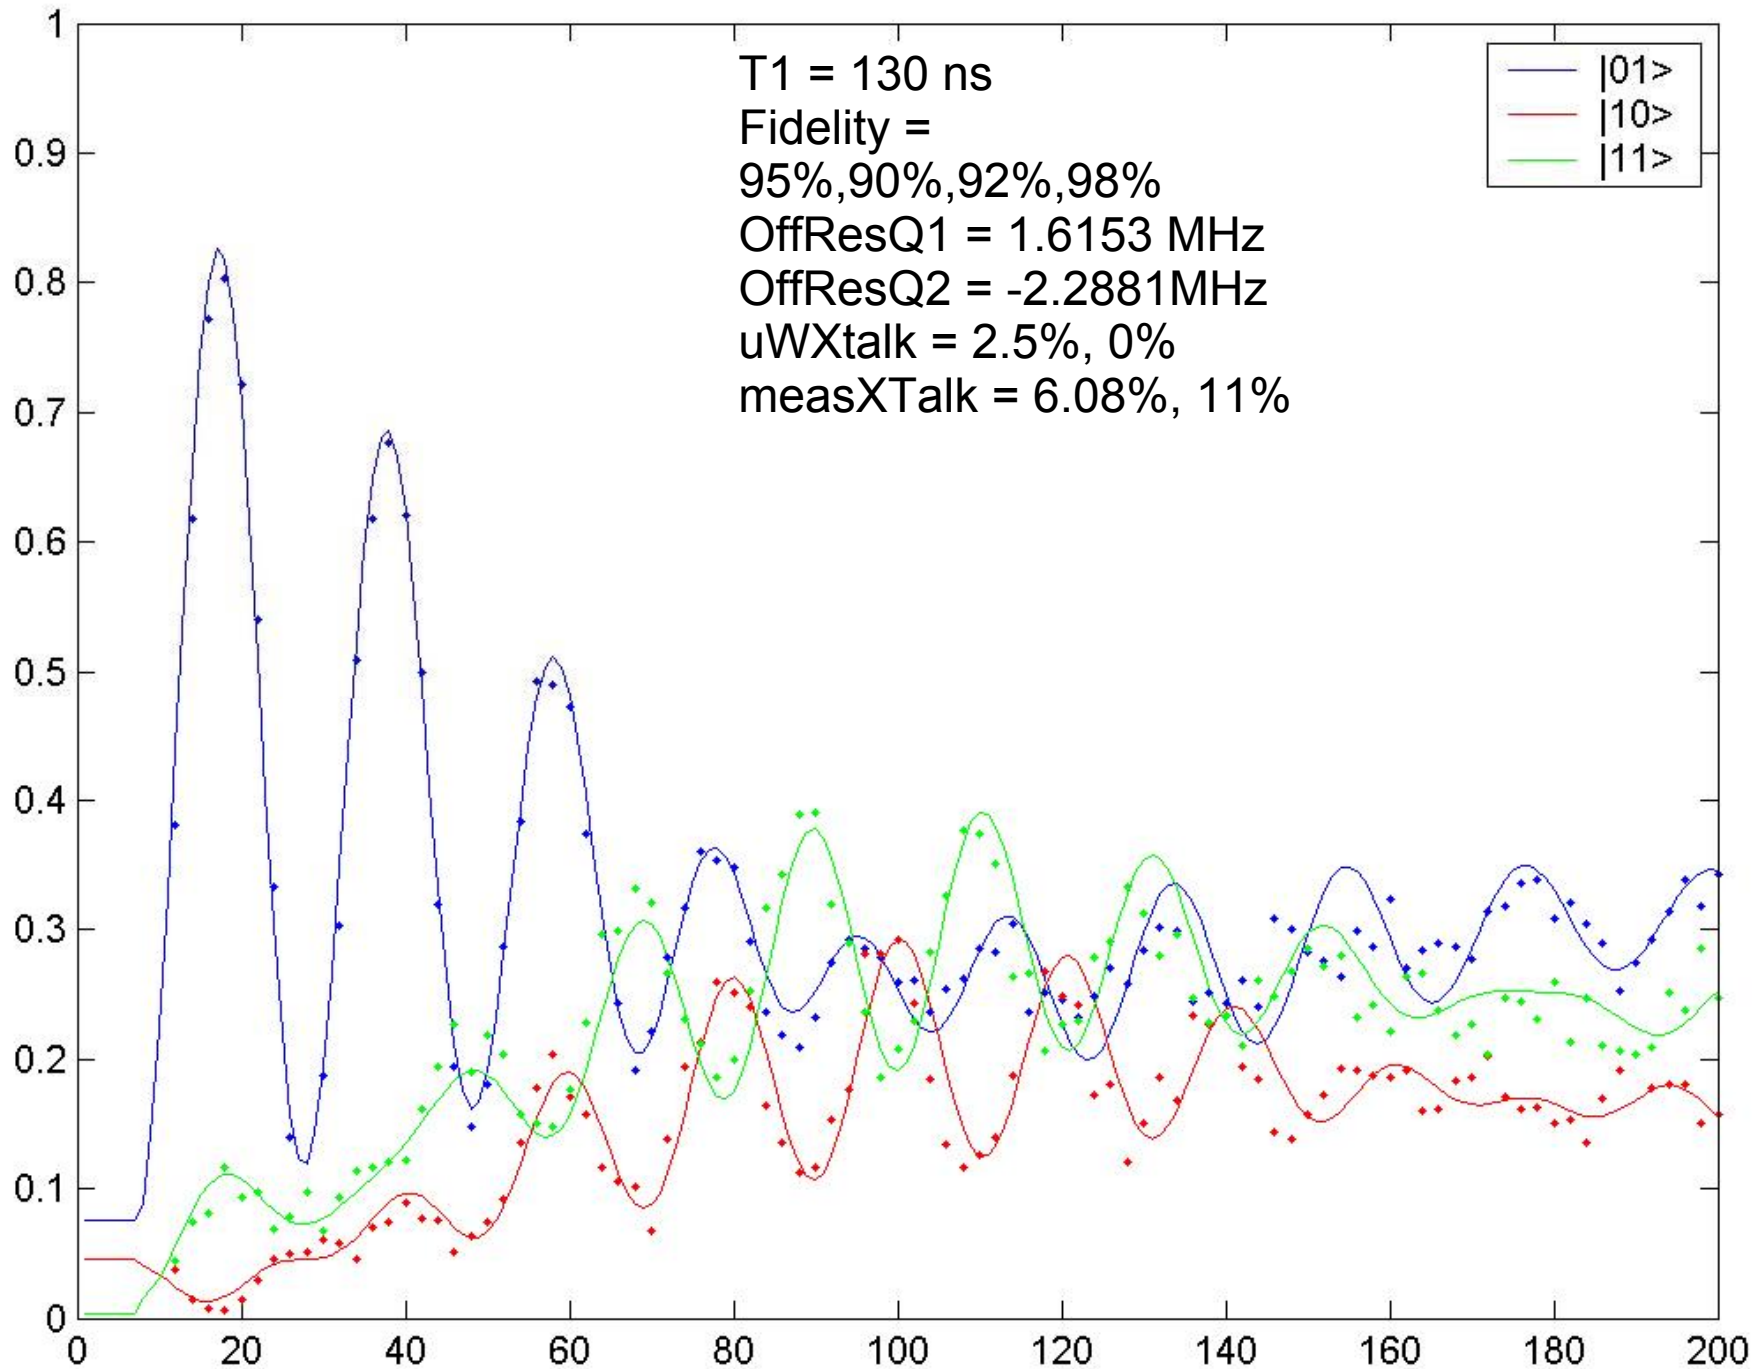

Probability of Measurement

# Why Simulate?

- Interpretation of the results of experiments
- Characterization of qubits
- Determination of whether experiments are feasible
- Determination of necessary improvements
