

# Design of Detachable Address Book for Telephone Speed-Dial Programming

**Name: Victor Garcia**

**School: Santa Barbara City College**

**Major: Electrical Engineering**

**Advisor: Yan Zheng, Electrical Engineering Department UCSB**

**Faculty Advisor: Stephen Long**

**Funding: National Science Foundation  
Cypress Semiconductor Corporation**

# The Big Picture

- Number Pad-less Phone
- “Picture” speed dial
- Receives any call

- Hand-held device
- Plugs into phone (wireless or phone line)
- LCD screen
- Number pad to program numbers

# Research Goals

## 1. Familiarize with Hardware

## 2. Familiarize with Software

## 3. Program handheld to act as an address book

# Method for programming microcontroller

## In PSoC Express

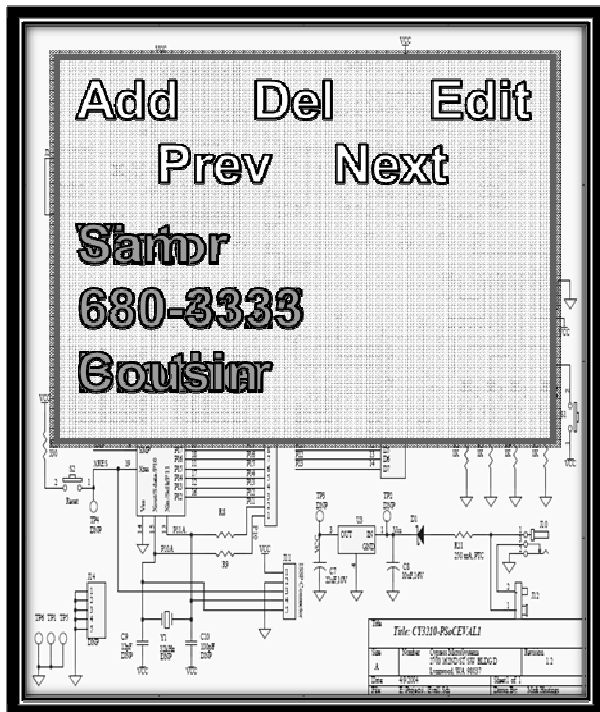

1. Select an input
2. Select an output
3. Choose a transfer function
4. View simulation preview
5. Connect jumper cables

LED1	OFF	ON
OFF	OFF	
ON		ON

## Program the microcontroller

# How to structure data/contacts within memory

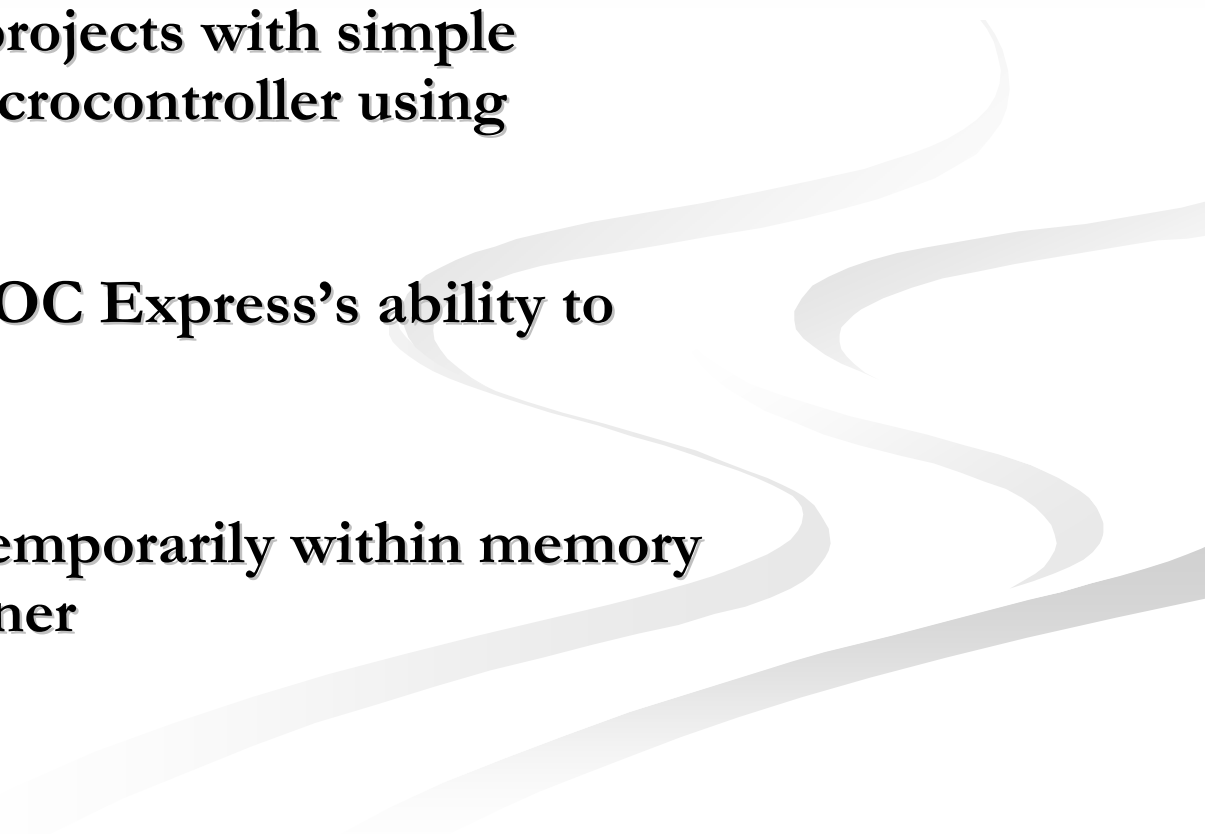

Name: ~~Stator~~  
Phone: 680-3335  
Affiliation: ~~Boussier~~

## Linked List data structure within memory

# Accomplishments to Date

- 1. Designed various projects with simple functionality of microcontroller using PSOC Express**
  - 2. Fully exhausted PSOC Express's ability to manage memory**
  - 3. Able to store data temporarily within memory using PSOC Designer**
- 
- A decorative graphic consisting of several overlapping, wavy, light gray lines that flow from the right side of the slide towards the left, partially overlapping the text of the list items.

# Future Plans

1. Able to store data within memory permanently
2. Integrate ICE (In Circuit Emulator) debugger

ICE-Cube

```
If (voltage < 3)
{
  _____
  _____
  {
```
